Session 9
Progress Check Questions
Chapters 14, 15, and 16

Dynamic Web Page Development with jQuery

Instructions:

1. Read all instructions/questions.

2. Prepare needed files.

3. Write/Answer your program code.

Each: @7 points approx.

Total: _____/100 points

Answer the following Questions:

1. Which option do you use to execute the callback function when a selection begins?

2. What options do you use to execute callback functions when items are added to or removed from a selection (while a selection is taking place)?

3. When using the selecting and unselecting options, how do you access each element added to and removed from the selection?

4. What selector would you add to a style sheet to customize the look and feel of the selection box?

5. Which option would you provide to the `accordion()` method to change the default content pane?

6. Which option and its values would you consider using to change how the `accordion()` method handles height?

7. What option would you use to make the `accordion()` method trigger a content transition using a mouseover event instead of a click event?

8. What option would you use to change the header element to an <h3> element?

9. Name the two options that you can use to limit the dates the user can input in to the Datepicker.

10. Which option sets the years populated in the year drop-down menu? What is an example value?

11. Which options provide the month and year options as drop-down menus?

12. Which option would you use to change the date format?

13. Does the Datepicker plugin give you the ability to translate its text into Spanish? How would you translate the weekday labels into Spanish?

14. Which option would you use to change the starting weekday?
